Purpose of Contact: Discussion of Topsoil requirements for ER and D&D Projects

Discussion

Mark Sattelberg and Lane Butler walked the B111 and B123 site. Mark Sattelberg then discussed the topsoil requirements in effect at the Site with his restoration person at the Rocky Mountain Arsenal. Based on that discussion, he recommends that the topsoil requirements for building demolition and environmental remediation projects consist of five to six inches of topsoil and mixing it into the underlying backfill with the ripper on a dozer or similar equipment. For larger projects, such as the final site regrade and revegetation, the carbon/nitrogen content of the soils needs to be evaluated.

Based on this and following discussions, the Site will use a nominal 5 inches of topsoil mixed with the underlying fill dirt to an approximate depth of 4 inches for the interim actions. For the final Site revegetation, DOE/KH should develop a revegetation plan that spells out how soils will be amended and what seed mixtures will be planted. The plan should take into account local topography, soil types, vegetation types, and moisture levels. It should be planned out well in advance so that everyone knows what will happen once the response action is done.
